Escher Correspondence Data

Escher Correspondence Server CSmessageStore.DAT near real time data processing and reporting

Data Integrity Institute Inc. offers an independent Escher Correspondence Server near real time data processing, directly, without using any Escher API or Escher tool. This process does not share, interrupt or lock any Escher resource.

Our Escher Correspondence Server near real time data processing:

- Directly reads in a near real time an Escher CSmesageStore.DAT without using any Escher API or Escher tool
- Does not share, interrupt or lock any Escher resource
- Skips previously processed messages
- Transforms new or updated messages into clean formatted data elements
- Using own referential lookup, redirects data into right AVRO, HBase or SQL data structures, suitable for deriving a semantic layer, analysis and reporting
- Processed data are secure because there is no any intermediate data storage
- All actual most recent data are marked
- All historic data are preserved
- Data are suitable for archiving
- Costs saving over 67% (on Microsoft Azure when Azure Sql is not used)
